

Does this have to hurt?

**No, your spay
doesn't have
to hurt.**

There is a better, gentler way to spay. It uses the same minimally invasive technology available in human medicine. It's called a single-port laparoscopic spay and it has been shown to reduce post-operative pain by up to 65%*.

Have her up and running in no time!

Less pain means that your girl is feeling better, recovering more quickly, and doesn't need as many drugs to manage her pain. All together, it's a better, more humane procedure.

Ask your veterinarian about a laparoscopic spay today.

As with any surgical procedure, individual results may vary and you should understand the risks involved. Your veterinary practitioner will be able to help you understand these risks and assess if your pet is a good candidate for this procedure. Biovision Veterinary Endoscopy, LLC makes no warranty express or implied pertaining to the services or quality of care rendered by your veterinarian, clinic and staff. *Devitt, Hailey, Cox, study published JAVMA Sept. 2006.
